Paper 1 Pure N	Mathematics 1	AHE	February/March 2021 1 hour 50 minutes
	er on the question paper. List of formulae (MF19)		

INSTRUCTIONS

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

INFORMATION

- The total mark for this paper is 75.
- The number of marks for each question or part question is shown in brackets [].

In the diagram, the graph of y = f(x) is shown with solid lines. The graph shown with broken lines is a transformation of y = f(x).

(a)	Describe fully the two single transformations of $y = f(x)$ that have been combined to give the resulting transformation. [4]
(b)	State in terms of y , f and x , the equation of the graph shown with broken lines. [2]
	AHEAD

Fin	d the rate of incr	rease at A of the	e x-coordinate	e of the point.

9	The	first	term of a progression is $\cos \theta$, where $0 < \theta < \frac{1}{2}\pi$.
	(a)	For	the case where the progression is geometric, the sum to infinity is $\frac{1}{\cos \theta}$.
			Show that the second term is $\cos \theta \sin^2 \theta$. [3]
		(ii)	Find the sum of the first 12 terms when $\theta = \frac{1}{3}\pi$, giving your answer correct to 4 significant figures.
			- FA

(b)	For the case where the progression is arithmetic, the first two terms are again $\cos \theta$ and $\cos \theta \sin^2 \theta$ respectively.
	Find the 85th term when $\theta = \frac{1}{3}\pi$. [4]
	AHEAD

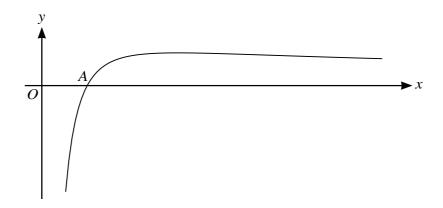

The diagram shows a sector ABC which is part of a circle of radius a. The points D and E lie on AB and AC respectively and are such that AD = AE = ka, where k < 1. The line DE divides the sector into two regions which are equal in area.

(a)	For the case where angle $BAC = \frac{1}{6}\pi$ radians, find k correct to 4 significant figures. [5]
	HEAD

(b)	For the general case in which angle $BAC = \theta$ radians, where $0 < \theta < \frac{1}{2}\pi$, it is given that $\frac{\theta}{\sin \theta} > 1$	
	Find the set of possible values of k . [3]]
