

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Question	Answer	Marks
1(a)	Value of x in the range 28.0–32.0 cm with unit.	1
	Value of y in the range 45.0–55.0 cm.	1
1(b)	Six sets of readings of x and y (different values) showing the correct trend and without help from the Supervisor scores 5 marks, five sets scores 4 marks etc.	5
	Range: Must include one value of $x \leq 10.0$ cm and one value of $x \geq 50.0$ cm.	1
	Column headings: Each column heading must contain a quantity and a unit where appropriate. The presentation of the quantity and unit must conform to accepted scientific convention e.g. x / m .	1
	Consistency: All raw values of x and y must be given to the nearest mm.	1
1(c)(i)	Axes: Sensible scales must be used, no awkward scales (e.g. 3:10 or fractions). Scales must be chosen so that the plotted points occupy at least half the graph grid in both x and y directions. Scales must be labelled with the quantity that is being plotted. Scale markings should be no more than three large squares apart.	1
	Plotting of points: All observations in the table must be plotted on the grid. Diameter of plotted points must be \leq half a small square. Points must be plotted to an accuracy of half a small square.	1
	Quality: All points in the table (at least 5) must be plotted on the grid. Trend of points on graph must be positive. All points must be within ± 1.0 cm (to scale on the axis with the y values) of a straight line.	1

Question	Answer	Marks
1(c)(ii)	Line of best fit: Judge by balance of all points on the grid about the candidate's line (at least 5 points). There must be an even distribution of points either side of the line along the full length. One anomalous point is allowed only if clearly indicated (i.e. circled or labelled) by the candidate. There must be at least 5 points left after the anomalous point is disregarded. Line must not be kinked or thicker than half a small square.	1
1(c)(iii)	Gradient: The hypotenuse of the triangle used must be greater than half the length of the drawn line. Both read-offs must be accurate to half a small square in both the x and y directions. The method of calculation must be correct e.g. not $\Delta x / \Delta y$. The sign of the gradient on the answer line must match the graph.	1
	y-intercept: Correct read-off from a point on the line and substituted into $y = mx + c$. Read-off must be accurate to half a small square in both x and y directions. or Intercept read directly from the graph with read-off at $x = 0$ accurate to half a small square.	1
1(d)	Value of A = candidate's gradient and value of B = candidate's intercept. The values must not be fractions.	1
	A has no unit and unit for B correct (m, cm or mm).	1
1(e)	Correct calculation of M with a consistent unit.	1
	Answer on the answer line to 3 significant figures.	1

Question	Answer	Marks
2(a)(i)	Value of x in the range 6.5–7.5 cm to the nearest mm with unit.	1
2(a)(ii)	Percentage uncertainty in x based on absolute uncertainty in the range 2–4 mm. If repeated readings have been taken, then the uncertainty can be half the range (but not zero) if the working is clearly shown. Correct method of calculation to obtain percentage uncertainty.	1
2(b)(i)	Value of T_1 in the range 0.4–1.0 s.	1
	At least two values of nT recorded where $n \geq 5$.	1
2(b)(ii)	Value of T_2 greater than T_1 .	1
2(b)(iii)	Correct calculation of $T_2 - T_1$.	1
2(c)	Second value of x .	1
	Second values of T_1 and T_2 .	1
	Quality: Second value of $ T_2 - T_1 < \text{first value of } T_2 - T_1 $.	1
2(d)(i)	Two values of k calculated correctly.	1
2(d)(ii)	Justification for s.f. in k linked to s.f. in x <u>and</u> $(T_2 - T_1)$.	1
2(d)(iii)	Valid comment consistent with calculated values of k , testing against a criterion stated by the candidate.	1
