

Question	Answer	Marks
1	Additional detail including safety considerations	6
	D1 precaution linked to <u>oil spillage</u> , e.g. use of cushion/sand box/tray for falling beaker to land or use of bungs/lids on beakers or use foam on bench/floor or use foam to prevent rising beaker hitting pulley	
	D2 precaution linked to <u>oil contact with skin</u> e.g. use gloves to avoid contact with oil	
	D3 keep M constant	
	D4 use a (top-pan) balance to measure M	
	D5 method to keep h constant e.g. use a fiducial mark to release the beaker from the same position or release from the same position on the <u>clamped</u> rule each time	
	D6 equation to determine z for method used, e.g. for timing h , $z = 2h / t$ or for one light gate, $z = L / t$ where L is the length of the interrupted beam or for two light gates, $z = \text{distance between light gates} / t$ Do not accept h / t .	
	D7 additional detail on diagram to measure h , e.g. clamp (metre) rule with stand on surface or use of set squares positioned on the surface to side of rule or spirit level positioned to side of rule	
	D8 use large value of h to increase time of fall of beaker	
	D9 repeat measurements of z for the same V <u>and</u> average z	
	D10 relationship valid <u>if</u> a straight line is produced (passing through $\left(\frac{1}{2bh}\right)$) Do not accept line passing through the origin.	

Question	Answer	Marks														
2(a)	gradient = $-\frac{t}{R}$ y-intercept = $\ln I_0 R$	1														
2(b)	<table border="1" data-bbox="842 395 1435 855"> <thead> <tr> <th data-bbox="842 395 1137 461">$1/C/10^4 \text{ F}^{-1}$</th> <th data-bbox="1137 395 1435 461">$\ln (V/V)$</th> </tr> </thead> <tbody> <tr> <td data-bbox="842 461 1137 525">0.91 or 0.909</td> <td data-bbox="1137 461 1435 525">0.896 or 0.8961</td> </tr> <tr> <td data-bbox="842 525 1137 588">0.76 or 0.758</td> <td data-bbox="1137 525 1435 588">1.012 or 1.0116</td> </tr> <tr> <td data-bbox="842 588 1137 652">0.63 or 0.633</td> <td data-bbox="1137 588 1435 652">1.115 or 1.1151</td> </tr> <tr> <td data-bbox="842 652 1137 716">0.61 or 0.606</td> <td data-bbox="1137 652 1435 716">1.131 or 1.1314</td> </tr> <tr> <td data-bbox="842 716 1137 780">0.48 or 0.482</td> <td data-bbox="1137 716 1435 780">1.253 or 1.2528</td> </tr> <tr> <td data-bbox="842 780 1137 855">0.36 or 0.357</td> <td data-bbox="1137 780 1435 855">1.348 or 1.3481</td> </tr> </tbody> </table> <p data-bbox="322 890 757 922">Values correct as shown above.</p>	$1/C/10^4 \text{ F}^{-1}$	$\ln (V/V)$	0.91 or 0.909	0.896 or 0.8961	0.76 or 0.758	1.012 or 1.0116	0.63 or 0.633	1.115 or 1.1151	0.61 or 0.606	1.131 or 1.1314	0.48 or 0.482	1.253 or 1.2528	0.36 or 0.357	1.348 or 1.3481	1
$1/C/10^4 \text{ F}^{-1}$	$\ln (V/V)$															
0.91 or 0.909	0.896 or 0.8961															
0.76 or 0.758	1.012 or 1.0116															
0.63 or 0.633	1.115 or 1.1151

	Uncertainties in $\ln (V/V)$ from ± 0.021 or ± 0.020 to ± 0.010 or ± 0.013	1														
2(c)(i)	Six points from (b) plotted correctly. Must be within half a small square. Diameter of points must be less than half a small square.	1														
	Error bars in $\ln (V/V)$ plotted correctly. All error bars to be plotted. Total length of bar must be accurate to less than half a small square and symmetrical.	1														

PUBLISHED

Question	Answer	Marks
2(c)(ii)	Straight line of best fit drawn. Do not accept line from top point to bottom point. Points must be balanced. Line must pass between (0.820, 0.95) and (0.845, 0.95) and between (0.400, 1.30) and (0.425, 1.30)	1
	Worst acceptable line drawn (steepest or shallowest possible line that passes through all the error bars). All error bars must be plotted.	1
2(c)(iii)	Gradient determined with clear substitution of data points into $\Delta y / \Delta x$. Distance between data points must be greater than half the length of the drawn line. Gradient must be negative.	1
	Gradient determined of worst acceptable line. uncertainty = (gradient of line of best fit – gradient of worst acceptable line) or uncertainty = $\frac{1}{2}$ (steepest worst line gradient – shallowest worst line gradient)	1
2(c)(iv)	y -intercept determined by substitution of correct point with consistent power of ten in m and x into $y = mx + c$.	1

Question	Answer	Marks
2(d)(i)	<p>R determined using gradient.</p> $R = -\frac{30.0}{\text{gradient}} = \frac{30.0}{\text{(c)(iii)}}$	1
	<p>I_0 determined using y-intercept with method shown.</p> $I_0 = \frac{e^{y\text{-intercept}}}{R} = \frac{e^{\text{(c)(iv)}}}{\text{(d)(i)}}$	1
	<p>R and I_0 determined correctly using gradient and y-intercept and R and I_0 given to 2 or 3 significant figures and R and I_0 given with SI units with appropriate powers of ten.</p> <p>Units: R: Ω or s F^{-1} I_0: A or V F s^{-1} or $\text{V } \Omega^{-1}$</p>	1
2(d)(ii)	<p>Percentage uncertainty in R with method shown.</p> $\text{percentage uncertainty in } R = \left(\frac{\Delta t}{t} + \frac{\Delta \text{gradient}}{\text{gradient}} \right) \times 100$ <p>or</p> <p>Correct substitution for max/min methods.</p>	1

Question	Answer	Marks
2(e)	<p>C determined to a minimum of 2 significant figures from (c)(iii) and (c)(iv) or (d)(i) with correct substitutions.</p> $C = \frac{\text{gradient}}{\ln V - y\text{-intercept}} \quad \text{or} \quad C = -\frac{\text{gradient}}{y\text{-intercept} - \ln V}$ <p>or</p> $C = -\frac{t}{R(\ln V - \ln I_0 R)} \quad \text{or} \quad C = \frac{t}{R(\ln I_0 R - \ln V)}$	1
