CANDIDATE NAME			
CENTRE NUMBER		CANDIDATE NUMBER	
CHEMISTRY			9701/33
Paper 3 Advanc	eed Practical Skills 1	Oc	tober/November 2021
		AME	2 hours
You must answe	er on the question paper.		

#### INSTRUCTIONS

You will need:

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.

The materials and apparatus listed in the confidential instructions

- Write your answer to each guestion in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- You may use a calculator.
- You should show all your working, use appropriate units and use an appropriate number of significant figures.
- Give details of the practical session and laboratory, where appropriate, in the boxes provided.

# Session Laboratory

#### **INFORMATION**

- The total mark for this paper is 40.
- The number of marks for each question or part question is shown in brackets [ ].
- The Periodic Table is printed in the question paper.
- Notes for use in qualitative analysis are provided in the question paper.

For Examiner's Use		
1		
2		
3		
Total		

This document has 12 pages. Any blank pages are indicated.

#### **Quantitative analysis**

Read through the whole method before starting any practical work. Where appropriate, prepare a table for your results in the space provided.

Show your working and appropriate significant figures in the final answer to **each** step of your calculations.

**1** Group 1 metal carbonates have the formula  $M_2CO_3$ . The identity of the metal ion,  $M^+$ , may be determined by a gravimetric method. The metal carbonate is reacted with excess acid and the mass of carbon dioxide given off is measured.

$$\mathbf{M}_2 CO_3(s) + 2HCl(aq) \rightarrow 2\mathbf{M}Cl(aq) + H_2O(l) + CO_2(g)$$

**FA 1** is a Group 1 metal carbonate,  $M_2CO_3$ . **FA 2** is 2.0 mol dm<sup>-3</sup> hydrochloric acid, HCl.

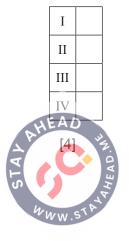

#### (a) Method

- Use the 25 cm³ measuring cylinder to transfer 25.0 cm³ of **FA 2** into a conical flask. Weigh the flask with the acid and record the mass.
- Weigh the container with FA 1 and record the mass.
- Carefully tip all of FA 1 into the acid in the conical flask. Swirl the contents of the flask and leave the flask to stand.
- Weigh the container with any residual FA 1. Record the mass.
- Calculate and record the mass of FA 1 added to the conical flask.
- Calculate and record the theoretical initial mass of flask + acid + FA 1.
- Swirl the flask occasionally while leaving it to stand for approximately 5 minutes.

#### During this step you may wish to start Question 2 or Question 3.

- Weigh the flask and contents and record this mass.
- Calculate and record the mass of carbon dioxide given off during the experiment.

#### Results

(i)	Calculate the number of moles of carbon dioxide given off in the experiment.
(ii)	$\mbox{moles of CO}_2 = \mbox{mol} \   \mbox{mol} \   \mbox{[1]}$ Calculate the relative formula mass, $M_{\rm r}$ , of ${\bf M}_2{\rm CO}_3$ .
(iii)	$M_{\rm r} \ {\rm of} \ {\rm M_2CO_3} =$
	<b>M</b> ⁺ is [1]
(c) One	e source of error in this experiment is the solubility of carbon dioxide in water.
(i)	Suggest <b>one</b> modification, to the method in <b>(a)</b> , to reduce the solubility of carbon dioxide in the solution in the flask.
	[1]
(ii)	An assumption made in the method in <b>(a)</b> is that the acid is in excess.
	Show by calculation that this assumption is true.

[2]

[Total: 10]

2 The identity of a Group 1 metal carbonate may also be found by a titration method.

**M**<sup>+</sup> in this question may or may not be the same cation as that in **Question 1**.

$$\mathbf{M}_2 CO_3(s) + 2HCl(aq) \rightarrow 2MCl(aq) + H_2O(l) + CO_2(g)$$

**FA 3** is an aqueous solution containing 7.46 g dm $^{-3}$  of a Group 1 metal carbonate,  $\mathbf{M}_2\mathrm{CO}_3$ . **FA 4** is 0.110 mol dm $^{-3}$  hydrochloric acid, HC *l*. bromophenol blue indicator

#### (a) Method

- Fill the burette with **FA 4**.
- Pipette 25.0 cm³ of **FA 3** into a conical flask.
- Add a few drops of bromophenol blue indicator.
- Carry out a rough titration and record your burette readings in the space below.

The rough titre is		cm <sup>3</sup>
--------------------	--	-----------------

- Carry out as many accurate titrations as you think necessary to obtain consistent results.
- Make sure any recorded results show the accuracy of your practical work.
- Record, in a suitable form below, all your burette readings and the volume of **FA 4** added in each accurate titration.

I	
II	
III	
IV	
V	
VI	
VII	

[7]

**(b)** From your accurate titration results, calculate a suitable mean value to use in your calculations. Show clearly how you obtained this value.

25.0 cm<sup>3</sup> of **FA 3** required ...... cm<sup>3</sup> of **F** 

(c) C	alculations
-------	-------------

	(i)	Give your answers to <b>(c)(ii)</b> , <b>(c)(iii)</b> and <b>(c)(iv)</b> to an appropriate number of significant figures.
	(ii)	Calculate the number of moles of hydrochloric acid present in the volume of <b>FA 4</b> calculated in <b>(b)</b> .
		moles of HC1 = mol [1]
(	(iii)	Calculate the number of moles of Group 1 metal carbonate, $\mathbf{M}_2\mathrm{CO}_3$ , present in 25.0 cm³ of <b>FA 3</b> .
		moles of $\mathbf{M}_{2}CO_{3}$ in 25.0 cm <sup>3</sup> = mol [1]
(	(iv)	Calculate the relative formula mass, $M_{\rm r}$ , of ${\bf M}_2{\rm CO}_3$ .
		$M_{\rm r}$ of $M_{\rm 2}CO_{\rm 3}$ =
	(v)	Identify the cation, <b>M</b> <sup>+</sup> .  Show your working.
		<b>M</b> ⁺ is
(d)	Qu	student carrying out a similar experiment, using the same method, found the cation in <b>estion 2</b> to be Rb <sup>+</sup> . The student is told that the acid provided, <b>FA 4</b> , was incorrectly prepared. e cation in the student's experiment should have been identified as K <sup>+</sup> .
		te whether the acid supplied is more, or less, concentrated than 0.110 mol dm <sup>-3</sup> . blain your answer.
		ניו

#### **Qualitative analysis**

Where reagents are selected for use in a test, the **name** or **correct formula** of the element or compound must be given.

At each stage of any test you are to record details of the following:

colour changes seen

Analysis Notes.

3

- the formation of any precipitate and its solubility in an excess of the reagent added
- the formation of any gas and its identification by a suitable test.

You should indicate clearly at what stage in a test a change occurs.

If any solution is warmed, a **boiling tube** must be used.

Rinse and reuse test-tubes and boiling tubes where possible.

No additional tests for ions present should be attempted.

(i)	Place a small spatula measure of <b>FA 5</b> into a hard-glass test-tube and heat the tube, gently at first and then more strongly.  Record <b>all</b> your observations.
	[2]
(ii)	Place the remaining <b>FA 5</b> into a 100 cm³ beaker and add approximately 15 cm³ of distilled water. Stir to make a solution. This solution is <b>FA 6</b> . You will use portions of <b>FA 6</b> for the following test and tests in <b>(b)</b> .
	To a 1 cm depth of <b>FA 6</b> in a test-tube add a 1 cm depth of dilute hydrochloric acid. Record your observations.

(a) FA 5 is a salt containing one cation and one anion, both of which are listed in the Qualitative

(b) (i) FA 7 and FA 8 are solutions each containing one cation and one anion, all of which are listed in the Qualitative Analysis Notes.

Carry out the following tests in separate test-tubes. Use a 1cm depth of each solution unless otherwise specified.

	observations		
solution	FA 6	FA 7	FA 8
Add a few drops of aqueous silver nitrate.			
FA 6			
FA 7			

[4]

(ii) Carry out tests using aqueous sodium hydroxide and dilute sulfuric acid to identify or confirm the identity of the ions in FA 6, FA 7 and FA 8.

Record your tests and observations in a table in the space below.

(c) (i) From your observations in (a) and (b) identify the cation and the anion present in each of FA 6, FA 7 and FA 8 by giving their formulae.

	cation	anion
FA 6		
FA 7		
FA 8		

ii) Give an ionic equation for a precipitation reaction observed in (b)(i). Include state symbols

# 2 Reactions of anions

ion	reaction
carbonate, CO <sub>3</sub> <sup>2-</sup>	CO <sub>2</sub> liberated by dilute acids
chloride, C <i>l</i> <sup>-</sup> (aq)	gives white ppt. with Ag <sup>+</sup> (aq) (soluble in NH <sub>3</sub> (aq))
bromide, Br <sup>-</sup> (aq)	gives cream ppt. with Ag <sup>+</sup> (aq) (partially soluble in NH <sub>3</sub> (aq))
iodide, I <sup>-</sup> (aq)	gives yellow ppt. with Ag <sup>+</sup> (aq) (insoluble in NH <sub>3</sub> (aq))
nitrate, NO <sub>3</sub> -(aq)	NH <sub>3</sub> liberated on heating with OH <sup>-</sup> (aq) and A <i>l</i> foil
nitrite, NO <sub>2</sub> <sup>-</sup> (aq)	NH <sub>3</sub> liberated on heating with OH <sup>-</sup> (aq) and A <i>l</i> foil
sulfate, SO <sub>4</sub> <sup>2-</sup> (aq)	gives white ppt. with Ba <sup>2+</sup> (aq) (insoluble in excess dilute strong acids)
sulfite, SO <sub>3</sub> <sup>2-</sup> (aq)	gives white ppt. with Ba <sup>2+</sup> (aq) (soluble in excess dilute strong acids)

# 3 Tests for gases

gas	test and test result
ammonia, NH <sub>3</sub>	turns damp red litmus paper blue
carbon dioxide, CO <sub>2</sub>	gives a white ppt. with limewater (ppt. dissolves with excess CO <sub>2</sub> )
chlorine, Cl <sub>2</sub>	bleaches damp litmus paper
hydrogen, H <sub>2</sub>	'pops' with a lighted splint
oxygen, O <sub>2</sub>	relights a glowing splint
